## Barramundi Asia

The new extension to **Barramundi Asia's** barramundi nursery was officially unveiled by the Minister for the Environment and Water Resources, Masagos Zulkifli, on 27 February.

The nursery is located in the south of Singapore on Pulau Semakau, now has 1,200 sq m more space and the addition of eight giant 50 cubic m tanks.

Barramundi Asia is ramping up production to 6,000 tonnes of fish yearly, which is more than what Singapore's 120 fish farms produced in 2018. This means a more consistent local fish supply and less fluctuations in fish prices throughout the year.

Founded in 2008, Barramundi Asia Pte Ltd (BAPL) is one of the largest companies in the world farming Barramundi in the ocean and draws on world-class sustainable fish farming practices and aquaculture technology. Granted the only two fish farming licenses in the Southern waters of Singapore, BAPL is the largest fish farm in Singapore by biomass. The Company focuses on the full value chain ("Farm-to-Fork") from the hatchery, nursery, sea cage farm, processing to marketing with its own registered brand Kühlbarra (B2C and B2B) which allows it to capture the full premium value. BAPL's vision is to become the world's largest supplier of fresh sustainable Barramundi. BAPL has also developed and wholly owns a vaccines business and production lab, Uvaxx Pte Ltd, which develops and supplies proprietary autogenous vaccines for its own and third-party farm operations.
